

zBOOST-ONE YX400-U FOR UMTS(2100Mhz)

Set-up Guide

The zBoost-ONE™ mobile signal booster extends a Cell Zone™ for 1 - 4 phones/devices on the same mobile network. The zBoost-ONE supports UMTS/HSPA voice and data protocols at 2100MHz in homes or offices. zBoost-ONE will boost signal up to 130 sq. m. or up to 12m from the zBoost unit.

There are **two steps** for setup:

FIRST: Sync zBoost-ONE to your mobile network.

- *NOTE: This step only needs to be performed once at the beginning of your set-up.*

 1. Place the zBoost-ONE unit on a window sill or location of strongest signal.
 2. Connect the zBoost unit to the provided power supply and plug into a power outlet.
 3. The SyncLink Button will flash red.
 4. Make a call with your device. If using a wireless data card, make a connection using the software on your computer.
 5. Press the SyncLink Button.
 6. The SyncLink Button will blink green and the Handset Indicator will turn on.

NOTE: If this does not happen, then the sync has failed. Disconnect the power from the wall outlet and repeat steps.

SECOND: Find the best position for the zBoost-ONE

1. The Signal Strength Indicator reflects the signal level being received by the unit at the window. Adjust the angle or position of the zBoost-ONE unit until the strongest possible signal is received – the most bars.
2. 3 or more lit bars will provide optimal performance (up to 12m from the zBoost unit).
