New Products:

If your cell phone coverage is spotty, the Wi-Ex Cell Phone Signal Booster can extend its reach up to 2,500 square feet. The booster system captures the wireless signal outside and brings it inside, enhancing the phone's signals so you can easily share e-mail messages, pictures and other data through your phone. The YX500-CEL works with 800MHz phones while the YX500-PCS works with 1,900MHz phones. Priced at \$300, each model comes with an amplifier base, a power supply, a base unit antenna, coaxial cable, a signal antenna and mounting hardware. A Wi-Ex Car Extender that boosts the cell phone signal in your car is also available for \$300.
