The place to find that special something that your Geek wants (or to find that something you want for yourself)

zBoost Cellphone Signal Extender

Posted on September 3rd 2008

Do you have crappy cell phone reception in your own house or apartment, or in your office building? Yeah, so do we, and it sucks balls. Why don't cell phones work better everywhere like they're supposed to?

Enter the ZBoost Cellphone Signal Extender.

With a ZBoost, you can take your one bar of cell phone reception and boost it up to normal levels so that you can actually use that cool Apple iPhone you bought with crappy AT&T cell coverage in your area.

There are three models. One that works with AT&T, Verizon and Alltel. One that works with T-Mobile, Metro PCS, Cricket, Suncom, and Sprint. And a dual-band version that works with all phones except Nextel. Why would anyone be a Nextel customer anyways?

[Go to ThinkGeek](#), pick the model that works best for you, order it, spend five minutes installing it, and sit back and bask in the glory of your geekness. Then invite all the girls over that you had over that one time that couldn't get good cell reception either, and have a party.

Price: [\\$250 - \\$350 from ThinkGeek.com](#) (search for "Cellphone Signal Extender")
