

## **zBoost Mobile1 boosts cell signals to new heights!**

Post-It

July 8, 2014

*“ I have always loved zBoost, so when contacted about their new mobile booster I was thrilled. I did receive a product sample to facilitate my review and a promotional item to thank me for testing out the zBoost Mobile1 device. All opinions are mine and are in no way influenced by receipt of product.”*

Out here in the country a cell service signal can at times be hard to come by...even here at the house. But if you go even further up in the mountains...it becomes near impossible. And we find ourselves in that predicament often. Like recently I went up and spent a day with some friends at their property even further up in the mountains than where I live and I knew from past experience that a cell signal was going to be non-existent. I was right. I thought Tate was going to have a coronary at first when he realized that he was going to have to go a full day without a signal.

But I also knew that should we absolutely need it, we could have one thanks to the [zBoost Mobile1](#). The device is great. Seriously, my phone would go from “No Service” to 3 bars in a second once it was placed in the cradle. It is easy to install, easy to use and does its job fabulously!!

This is what it looks like in the car.

You can mount the cradle where it is convenient for you.

Then you just place your phone in the cradle and let it work its magic.

We would have loved it if you could boost the signal for more than one phone. That is the downside. It only works for the phone that it is connected too, not all the phones in the car. And I would LOVE it if they had a “walk-around” version!! Then I could have taken it out to the camp and had my phone working the whole time instead of just when connected to the car. But, it does work for its intended purpose AND it did save the day when I needed to get in touch with Bric, who was at home and then again when there was a slight emergency going on and our friend needed to be in touch with his son.

Otherwise, without the zBoost we would all have been out of luck! So for those that live/travel in remote areas or areas that have poor reception, you are in luck!!

The zBoost Mobile1 cell phone signal booster extends an in-vehicle cell zone (phone must be in the cradle). The dual band booster captures the signal outside of your car and amplifies it on the inside for a stronger signal. The unit boosts voice and text for all major carriers.

Easy installation – Package includes everything you need: a bi-directional amplifier unit housed in a sturdy, lightweight cradle. The cradle amplifier connects to the dash-mount bracket and also connects to the vehicle's 12V power through a power adapter via USB cable.

- zBoost phone cradle for hands-free operation
- Adhesive dash-mount bracket with swivel base
- Power adapter with USB cable
- External magnetic mount antenna with cable

**Benefits Include:**

- Boosts signal for voice and text for all phones
- Boosts in-vehicle signal for a single user
- Reduces dropped calls and dead zones
- Works with all major cellular service providers
- “Hands-free” operation
- Extends cell phone battery life
- Extends cell phone range

Bric and Tate had my zBoost mobile installed in just a few minutes with no problems what so ever. They said it was so easy I could have done it myself and it requires no special tools or equipment. The retail cost is around \$89.99 and can be purchased directly from [zBoost](http://zBoost.com) and at some major retailers.
