# zBoost zPersonal YX300

Single-user  
Cell Phone Signal Booster

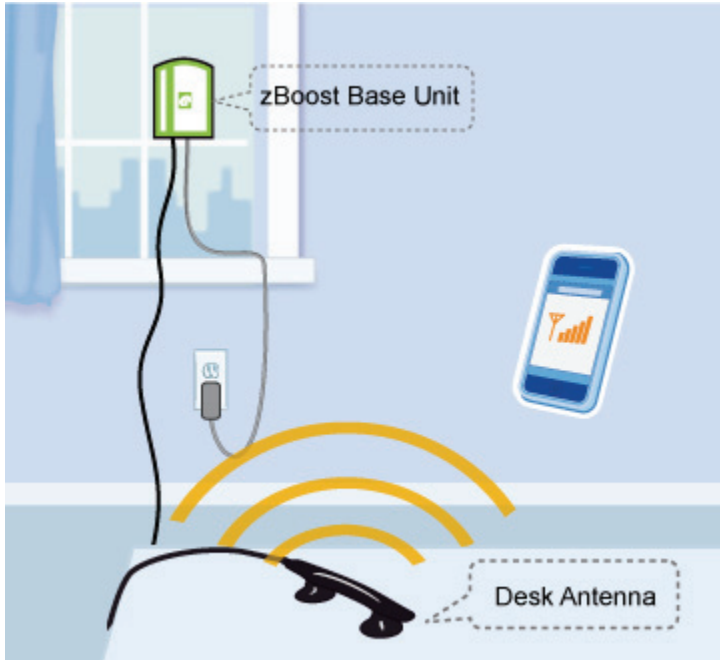

**User Guide**

## zBOOST® zPERSONAL (zP) YX300

### Setup overview:

The package includes everything you need: zBoost base unit with suction cups, power supply, 20 ft cable and desk antenna with suction cups. Place the zBoost base unit in a window (or anywhere you receive signal) and connect to a power outlet, then place the desk antenna in your work zone/dead zone. Signal is now being transmitted from the base unit to the desk antenna via the connecting 20 ft. cable.

## PACKAGE CONTENTS:

---

### FIRST:

Place zBoost base unit in a window or anywhere you receive at least one bar. You must have some signal where you place zBoost. It does not create signal.

---

### SECOND:

Connect the antenna to zBoost base unit and place antenna in the center of your workspace. For best results, the antenna should remain at least 10 ft from your zBoost base unit.

---

### THIRD:

Plug the power supply into an outlet and connect the other end of the power supply to zBoost. When the zBoost® base unit displays a green light, your zBoost® zPersonal is working properly.

**Note:** If a red light appears during set up or anytime during use, move the desk antenna further from the zBoost base unit and/or move the phone away from the zBoost base unit or desk antenna.

**For customer service:**

Call **1-800-871-1612** to reach customer support.

**For Returns:**

Call **1-800-871-1612** to request a Return Authorization number. A customer service representative will provide you with return shipment instructions. A Return Merchandise Authorization (RMA) number must be provided before returning the product.

1 Year manufacturer warranty.
